**E-Waste Compliance & Environmental Governance Report**
**Student Name:** Tejas Pawar
**Roll Number:** 24102B0033
**Class:** Third Year, CMPN-B

# 1. Statutory Framework & Guidelines

The management of electronic waste in India is governed by the E-Waste (Management) Rules, 2022, enacted under the Environment Protection Act, 1986, and effective from April 1, 2023. The central mechanism of these rules is Extended Producer Responsibility (EPR), which legally obligates producers of electrical or electronic equipment (EEE) to meet specific recycling targets through registered recyclers.

- **EPR Certificate Generation:** Compliance is tracked via EPR certificates generated on the official portal based on the recycling of four primary end products: gold, copper, aluminum, and iron.
- **RoHS Limitations:** Under sub-rule 16(1), new EEE components must not contain Lead, Mercury, Hexavalent Chromium, Polybrominated Biphenyls, or Polybrominated Diphenyl Ethers beyond a maximum concentration value of 0.1% by weight in homogenous materials. The limit for Cadmium is set strictly at 0.01% by weight.
- **Bulk Consumer Mandate:** Entities utilizing at least 1,000 EEE units must ensure their e-waste is handed over exclusively to registered producers, recyclers, or refurbishers.

# 2. Mandatory EPR Targets & Statutory Fee Slabs

Producers are assigned phase-wise recycling obligations calculated as a percentage of their annual e-waste generation. Registration processing fees are dynamically determined by the total metric tonnes (MT) of the assigned recycling target.

**Phased EPR Recycling Targets**

| Financial Year | Mandatory Recycling Target |
|---|---|
| 2023-24 & 2024-25 | 60% of generation |
| 2025-26 & 2026-27 | 70% of generation |
| 2027-28 onwards | 80% of generation |

**CPCB Registration Fee Structure**

| EPR Target Slab (MT) | Registration Fee (₹) |
|---|---|
| Less than 50 MT | 2,500 |
| 50 MT to under 100 MT | 7,500 |
| 100 MT to under 1,000 MT | 1,50,000 |
| 1,000 MT to under 5,000 MT | 10,00,000 |
| More than 5,000 MT | 15,00,000 |

# 3. Enterprise Audit Ledger (FY 2025-26)

The following compliance matrix evaluates five major electronics companies operating in India. Target calculations are based on the FY 2025-26 statutory requirement of 70%. Formula applied: Target (MT) = Annual E-Waste Generated × 70%.

| Enterprise Name | Entity Role | Annual E-Waste (MT) | Target (70%) | Fee Applicability | Compliance Status |
|---|---|---|---|---|---|
| **Tata Electronics** | Manufacturer | 8,400 MT | 5,880 MT | ₹15,00,000 | Compliant |
| **Dixon Technologies** | Producer | 6,850 MT | 4,795 MT | ₹10,00,000 | Compliant |
| **Kaynes Technology** | Refurbisher | 2,400 MT | 1,680 MT | ₹10,00,000 | Compliant |

| | | | | | |
|---|---|---|---|---|---|
| **Syrma SGS** | Producer | 1,850 MT | 1,295 MT | ₹10,00,000 | Compliant |
| **Avalon** | Producer | 720 MT | 504 MT | ₹1,50,000 | Compliant |

The calculated EPR targets dictate the required purchase of offsetting certificates from formal e-waste recyclers. If an audited enterprise fails to procure sufficient metal-weight certificates for gold, copper, aluminum, or iron, they are subject to dynamic environmental compensation charges based on their specific MT deficit.
